FINAL: FOR DISTRIBUTION

CorreLog Signs Strategic Partner Agreement with Paris-based Solutions Provider Total Device

International partnership delivers industry-leading security event correlation capability alongside provider of leading data loss prevention for removable media devices

Naples, FL, May 30, 2012 – [CorreLog](http://www.correlog.com), the leader in software solutions for IT security event correlation, today announced an international partner agreement with [Total Device](http://www.totaldevice.com), a Paris-based software vendor that specializes in the prevention of unauthorized use of removable media devices in enterprise-sized organizations. The partnership strengthens CorreLog's IT security platform, built on event correlation and automated helpdesk ticketing, with a robust easy-to-manage and highly configurable solution that prevents data leakage from removable devices such as USB keys, FireWire, DVD/CDs, SC cards, flash drives, mobile phones, MP3 players, and other easily concealed devices.

"Our relationship with Total Device management goes back several years and this agreement adds another strong partner in Europe for us," said George Faucher, CorreLog CEO and President. "With strong partnerships in the UK and Germany, Total Device solidifies our ability to support customers in French speaking countries in Europe, Southern Europe, Middle East and Africa."

The CorreLog and Total Device partnership addresses key IT security issues every enterprise must consider – a preventative approach to IT security, and ever increasing bring-your-own-device (BYOD) work environments. The CorreLog correlation engine has the capability to correlate thousands of log messages every second to find matches of user activity most indicative of intrusion or malicious threat. Upon identifying the threat, CorreLog can automatically issue an alert in the form of a helpdesk ticket and/or email so immediate action can be taken.

As BYOD continues to grow and the cost of large capacity removable media shrinks, the probability of data leakage increases. Total Device enables IT administrators and security managers to quickly view and control all storage devices connected to workstations, laptops and servers. Upon detection of any threat, Total Device denies access to unauthorized data and alerts CorreLog to issue a helpdesk ticket and/or email alert.

“CorreLog perfectly complements our range of solutions by offering a wonderful SIEM solution that’s very easy to deploy and use,” said Laurent Delaporte, Total Device CEO. “By integrating CorreLog and Total Device, we offer large organizations a fantastic solution with a very high level of IT security.”

About CorreLog:

CorreLog, Inc. is the leading independent software vendor (ISV) for IT security log management and event correlation. CorreLog's flagship product, the CorreLog Enterprise Server, combines log management, Syslog, Syslog-NG, SNMP, auto-learning functions, neural network modeling, proprietary semantic correlation, automated help-desk ticketing and reporting functions into a unique multi-platform security solution. CorreLog Enterprise Server operates across Windows, UNIX, Linux and mainframe platforms, shipping with an out-of-box PCI DSS compliant CorreLog agent for IBM z/OS, the world’s most popular mainframe operating system.

CorreLog delivers an essential viewpoint via dashboard console, providing verifiable and actionable information on the activity of users, devices, and applications to proactively meet organizational SLAs and regulatory requirements. Additionally, CorreLog automatically identifies and responds to any suspicious behavior, network attacks, or policy violations by indexing and correlating user activity and event logs, then archives the data in an enterprise server system location. This allows customer organizations to quickly identify then proactively respond to compliance violations, policy breaches, cyber-attacks and insider threats. For auditing and forensics, CorreLog facilitates regulatory requirements set forth by PCI DSS, HIPAA, SOX, FISMA, NERC, NCUA, and many other standards. CorreLog markets its solutions through both direct and indirect partner channels.
